Brookfield, ST | US Citizen | Willing to relocate

Experience

Embedded Firmware Intern, Example Motor Controls, Fairview, ST — May 2025–Aug 2025

- Cut motor startup current spikes by 35% by adding a soft-start ramp to STM32 firmware in C, measured with a current probe over 50 starts
- Reduced board bring-up time from 2 days to 4 hours by writing a Python test script that checks 40 analog and digital channels over UART
- Fixed a CAN bus timeout that dropped 1 in 200 messages by correcting the bit-timing settings, confirmed over a 12-hour soak test

Test Engineering Intern, Example Power Systems, Brookfield, ST — May 2024–Aug 2024

- Automated efficiency testing of a 500 W power supply with LabVIEW and a programmable load, cutting each test run from 3 hours to 25 minutes
- Found a thermal derating error in a 12 V module by logging 8 thermocouples for 48 hours, and the design team changed the heatsink

Projects

Senior Design: Solar Charge Controller — Fall 2025–Spring 2026
KiCad, STM32, C, LTspice

- Raised harvested energy 18% over a fixed-voltage controller by running perturb-and-observe MPPT on an STM32, measured on a solar simulator
- Designed a 2-layer KiCad board for a 100 W buck stage that passed a 4-hour full-load burn-in below 70 °C

Digital Audio Filter on an FPGA — Spring 2025
Verilog, Vivado, MATLAB

- Ran a 32-tap FIR low-pass filter at 48 kHz on a Basys 3 board, matching the MATLAB design within 0.3 dB across the passband

Education

B.S. Electrical Engineering, GPA 3.71/4.00 — Spring 2026
Example State University
Relevant coursework: Embedded Systems, Power Electronics, Control Systems, Analog Circuit Design
Activities: Eta Kappa Nu

Skills

Software: C, Python, MATLAB, Verilog, KiCad, LTspice, LabVIEW, Git
Hardware/Lab: Oscilloscope, Current probe, Programmable load, STM32, FPGA, CAN bus
Certifications: Engineer in Training (EIT), IPC-A-610 Certified IPC Specialist
