Springfield, ST | Open to relocation

Education

B.S. Electrical Engineering, minor in Mathematics, GPA [X.XX]/4.00 — Expected Spring 2027
[University], Springfield, ST
Thesis: Efficiency Limits of a Small Buck Converter at High Switching Frequency
Honors: Dean's List, six semesters, Departmental Honors Program
Selected coursework: Embedded Systems, Power Electronics, Digital Design, Control Systems, Signals and Systems, Electromagnetics, Linear Algebra, Probability and Statistics
Activities: IEEE student branch, Tau Beta Pi

Associate of Science, Pre-Engineering — Spring 2024
[Community college], Springfield, ST
Selected coursework: Calculus I to III, Physics with Calculus, Programming in C

Honors and Awards

Example Engineering Honors Award, [University] College of Engineering — 2026

- Given to the top [X]% of the electrical engineering class by cumulative GPA

Sample Design Showcase, First Place, [University] Senior Design Day — 2025

- Chosen by a panel of [X] faculty and industry judges from [X] teams in the electrical track

Dean's List, [University] — 2023 – 2025

- Earned for a term GPA of [X.XX] or higher in six of six semesters
- Kept the standing while working [X] hours a week and holding a research position

Scholarships

Example Foundation Engineering Scholarship, Example Foundation — 2024 – 2027

- Renewed each year for a GPA above [X.XX] and ten hours of campus service

Sample State Merit Scholarship, [State] Education Agency — 2023

Experience

Power Electronics Research Assistant, [University] Power Lab, Springfield, ST — Summer 2025 – Present

- Built a [X] W half-bridge test board in KiCad and measured switching loss at [X] kHz with a current probe and an oscilloscope, then compared the result with an LTspice model to find where the loss came from
- Wrote a Python script that turned oscilloscope captures into efficiency curves, cutting the time to process one run from [X] minutes to [X] and removing hand copying of numbers into a spreadsheet
- Presented the results to the lab group and wrote the methods section of a draft paper
- Trained two new students on the lab's oscilloscope, electronic load and probe safety rules

Embedded Firmware Intern, [Engineering company], Springfield, ST — Summer 2024

- Ported a sensor driver from a vendor library to bare-metal C on an ARM Cortex-M4, saving [X] KB of flash
- Found a missed interrupt with a logic analyzer and fixed it by moving the handler to a higher priority, removing a dropped-sample bug that had stayed open for [X] weeks and that two engineers had missed in earlier reviews
- Added unit tests for the driver and ran them on every commit

Teaching Assistant, Digital Design, [University] Department of Electrical Engineering, Springfield, ST — Fall 2025 – Spring 2026

- Led two lab sections of [X] students each and held weekly office hours
- Wrote three Verilog lab handouts, and students raised the average lab score by [X] points
- Graded [X] lab reports a week and returned each one with written comments within [X] days

Sales Associate, [Retail store] — Summer 2022 – Summer 2023

- Handled about [X] customers a shift and closed the register to within [X] dollars each night

Projects

CubeSat Power Board (KiCad, LTspice) — Fall 2025 – Spring 2026

- Designed a [X] W CubeSat buck converter in KiCad and LTspice, measured at [X]% efficiency on an electronic load
- Cut output ripple from [X] mV to [X] mV by shrinking the switching loop, verified on an oscilloscope
- Wrote the board bring-up plan and test report that the team used for its design review
- Presented the design to [X] judges at the university design showcase

Bench Data Logger (STM32, C, Python) — Spring 2025

- Wrote STM32 firmware in C to sample a 4-channel SPI ADC at [X] kHz and stream it to a Python logger
- Moved UART writes to DMA after a logic analyzer showed dropped samples, cutting losses to [X]%

FPGA Audio Equalizer (Verilog, Vivado) — Fall 2024

- Built a [X]-band equalizer in Verilog on an FPGA board and checked the frequency response against a MATLAB model

Line-Following Robot (C, STM32) — Spring 2024

- Tuned a PID loop for a two-wheel robot until it held the line at [X] m/s on a test track
- Logged sensor readings over UART and plotted them in Python to pick the loop gains
- Rebuilt the sensor board after a logic analyzer showed crosstalk between two traces

Skills

Software: KiCad, LTspice, C, Python, Verilog, MATLAB
Hardware/Lab: STM32, Oscilloscope, Electronic load, Logic analyzer, Current probe

Certifications

Fundamentals of Engineering (EIT) exam, passed, [State] Board of Engineering — 2026

Soldering Certification, Example Standard, Example Training Institute — 2025

Activities and Service

Volunteer Tutor, Calculus, [University] Learning Center — Fall 2024 – Present

- Tutored [X] students a week and wrote practice sets for the exam review sessions
- Trained [X] new tutors on how to explain a limit problem without giving the answer

Outreach Leader, Robotics Day, [University] IEEE student branch — Spring 2025

Professional Organizations

Member, IEEE — Fall 2023 – Present

Officer, Treasurer, Tau Beta Pi, Example Chapter — Spring 2025 – Present
